

Dear business partners,

Let us present you our company **DEGA CZ s.r.o.** and also, be so kind and allow us to propose you partnership and cooperation in sale and distribution of our products and services (our company will support you as our business partner in sale ,including advertising materials).

DEGA CZ (www.dega.cz) is producer of stationary gas and vapor detectors.

Company has been established in year 1990 and is settled in Czech Republic (Prague). Production of detection systems involves development and design, production, testing, distribution , regular control and calibration, guarantee and after-guarantee service. Technical and business consultancy , especially in prepare of project and selection procedure is obvious too. Based on Dega system and it's accessories (relay module , optical and acoustic signalization) , it 's possible to build complex for emergency monitoring of work and living environment.

REFERENCE : Dega detectors were during years 1990 – 2007 delivered to more than 2700 customers in CZ and foreign countries for application in different areas of industry (Škoda car, Bosch, Linde Gas, Synthesia etc.) , energetics , pharmaceutical industry, carriage and also in different shopping centres.

PRODUCTS: Production of company Dega includes these types of detectors:

- **STATIONARY INDUSTRIAL GAS DETECTOR DEGA**

Detection system of dangerous gas intended for signalization of certain concentration of gas or fluid in watched area (water, air). It consists of evaluating UNIT, SENOSR and ACCESSORIES. DEGA DETECTOR is possible to use alone or as a part of complex security of guarded environment: Electrical fire signalization + Detection of hazardous gases and vapors + Electrical security signalization.

Detectors:

- **Dega NSx**, detector with semi conductance sensor for “Area with danger of explosion” (certification: ATEX EEx demb IIB+H2 T5)
- **Dega NBx** , detector with semi conductance sensor for “Area without danger of explosion” , detection of more than 30 gas types
- **Dega NBx–E** detectors with electrochemical sensor for “Area without danger of explosion”, detection of more than 30 gas types
- **Dega NBCO-2**, detector with infrared sensor for “Area without danger of explosion”.
- **Dega DV-T**, detector of Ammonia amount(NH₃) in water, which we offer in two types, that is DEGA DV (basic type) and DEGA DV-T (more resistant against overpressure in conduit up to 700 kPa) .

- **STATIONARY COMPACT GAS DETECTOR DEGA04** for inflammable gas detection (natural gas, biogas, CH₄), inflammable gases (propane-butane), carbon monoxide (CO), Ammonia (NH₃) . Construction of this equipment consists of evaluating unit and acoustic and optical signalization. Detector is suitable for simple applications.

- DEGA CZ supports for its products wide spectra of **ACCESSORIES**. (Two-tone piezoelectric siren, Dynamical trumpet, GSM module, lightning panel one- or two-sided, detector covers, test bed).

In case of interest about cooperation with us, don't hesitate and contact us
