

DEGA VISIO III

Visualisation software for gas detection

For clarity, we recommend this software, which enables the comprehensive and detailed monitoring of the entire detection system from one central location.

The software allows the monitoring of individual transmitters and of entire units, the backing-up of the status of all the transmitters with the possibility of both tracing their history in graphic form and providing an option for the export of the data.

Technical requirements

Operating system	Microsoft Windows XP or higher, Windows 7 recommended
Required software	Microsoft Framework 4.0
Processor	Minimum 2.5 GHz, recommended dual-core 2.5GHz
RAM	At least 2GB, recommended 4 GB
Free space on HDD	20 GB
Ethernet for communication with controllers via Ethernet	
USB for communication with controllers via RS485
